

on the dock, and nosing a clump of old oyster near shore in about four of water.

After H. Blount, president of the shipbuilding firm, drove the ship upriver, returned in a few minutes in his own boat, Explorer, and pulled the schooner into its proper berth. No damage was apparent.

It was determined later that the engines did not reverse because the reversing arms on the engines had not been tightened, causing one arm to fall off and the other to slip when the engine house controls were used.

The launching itself was a marvel of smoothness. The traditional champagne christening was performed by Mrs. A. C. Anger, wife of a consulting

Museum Starts Indian Lectures

The first in a series of lectures on the American Indian began yesterday morning at the Haffenreffer Museum in Bristol for school pupils.

Lectures are being given by Dr. J. Louis Giddings of Brown University and director of the museum.

His talks are geared for pupils of the seventh, eighth and ninth grades.

The series will continue three months. It is similar to one which was presented last year.

The current series, "Native and Settlers in Old New England," is a description of the Indians as found by the first settlers in America and the relations between the two groups.

Dr. Giddings, associate professor of sociology, recently returned from a summer in Alaska where he continued archeological research which he had begun during the 1930's.

An account of his 1958 expedition will be given at the Nov. 4 lecture. It is entitled "Exploring Early Man in the Arctic."
